

High-Assurance Authentication

For Remote Employees Has Never Been Easier!

Are your remote employees really secured?

Over 80% of data breaches are associated with compromised passwords. As long as users handle their own credentials, the entire organization is susceptible to phishing attacks and credential abuse.

The massive increase in remote work makes standard user authentication the weakest link of most data security setups. Passwordless MFA is the fastest and most cost-efficient way to finally have a secure decentralized workforce.

Benefits of Octopus Passwordless MFA

■ KEEPS DATA AND USERS SAFE

Prevent account breaches with a strong MFA solution for all remote access needs.

■ LETS EMPLOYEES WORK

User-friendly and easily deployed authenticator to keep employees happy.

■ LIBERATES ADMINISTRATORS

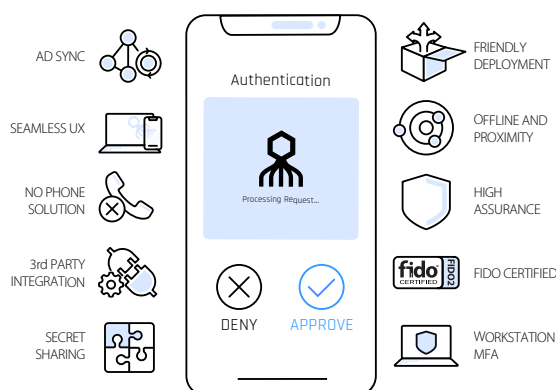

No more password related tickets and no policies to manage or enforce resulting in a more available IT team.

■ INNOVATION STARTS NOW

Become a Passwordless Enterprise with a gradual path to free your organization from passwords altogether. No architecture limitations.

The Octopus Authenticator

Hassle-free mobile authenticator that delivers a simple, fast and highly secure experience in any scenario, online and offline, utilizing unique secret sharing technology.

How It Works

Push notifications are securely delivered via the Octopus Cloud Service, keeping authentication secret fully resistant to interception and requiring only the user's biometric signature.
